Leg Extension and Curl Machine Launched for Home-Based Lower-Body Workouts by Strongway Gym Supplies

August 24, 2026

Coventry, UK - August 24, 2026 -
Strongway Gym Supplies has announced the availability of a leg extension and curl machine for home-based strength training, adding a dedicated lower-body station to its expanding fitness equipment range. The machine is designed around two established resistance exercises, bringing leg extension and leg curl movements together within a single unit intended for domestic workout spaces.

The latest release provides a focused option for training the quadriceps and hamstring muscle groups. A seated position supports leg extension movements, while the machine can also be configured for leg curls, allowing opposing areas of the upper leg to be trained using the same piece of equipment. The arrangement gives home gym users another way to include targeted lower-body work alongside free weights, racks and other resistance equipment.

Product information and specifications such as the weight loading capacity and the range of exercises

possible can be viewed at: https://strongway.co.uk/products/strongway-leg-curl-and-extension-machine.

Dedicated lower-body machines can have a practical role in home gyms where exercise variety is important but available space is limited. Rather than requiring separate stations for extension and curl movements, a combined machine brings both functions into one frame. This can make it easier to include direct leg exercises within a wider routine covering the upper body, lower body and core.

The machine can be incorporated into different training formats depending on the structure of a workout. Traditional resistance sessions may place leg extensions and curls alongside squats, lunges and other compound movements, while shorter circuits can use the machine as one station among several. Resistance levels and repetitions can be adjusted to suit the intended session, with appropriate technique and loading remaining important during use.

Research into home exercise has also examined the broader role of accessible training arrangements. A 2022 review titled ?Home-fitness and active ageing: A review?, published in the Scientific Journal of Sport and Performance and conducted at the University of Urbino ?Carlo Bo? in Urbino, Italy, found that regular home-based exercise can play a key role in maintaining physical and cognitive health in adults. Conducted by Capriotti A, Patregnani V, and Federici A, the review concluded that individuals engaging in consistent physical activity at home tend to experience a higher quality of life than less active individuals, highlighting the importance of accessible exercise strategies for healthy ageing.

The findings provide useful context for equipment that allows particular muscle groups to be trained within a home setting. A dedicated leg machine can form part of a consistent exercise programme by providing a repeatable setup for lower-body movements. Its use can also complement broader training sessions involving dumbbells, barbells, cable systems or cardiovascular equipment.

Strongway Gym Supplies continues to maintain a wider selection of equipment intended for residential fitness areas, with products covering strength training, free weights, cardio exercise and related gym accessories.

Those wishing to discover the extended range of home fitness equipment including barbells, dumbbells, weight benches, and more, can visit: https://strongway.co.uk/.

Home gyms are often assembled according to the space available and the type of training being undertaken. For some users, a combination of free weights and multifunctional machines provides sufficient exercise choice, while others may favour equipment designed around particular movements. A combined extension and curl machine offers a more specialised addition, particularly for routines where direct quadriceps and hamstring exercises form part of the programme.

The equipment may also be used alongside compound lower-body exercises rather than as a replacement for them. Squats and lunges involve several muscle groups and can form the main movements in a strength session, with extensions and curls providing more targeted work. This distinction can be useful when arranging a balanced home routine, particularly where training plans include exercises with different movement demands.

The release adds a dedicated lower-body option to Strongway Gym Supplies? existing home fitness catalogue. By incorporating leg extension and curl functions within one machine, the latest equipment provides a straightforward way to add targeted resistance exercises without installing two separate stations. The announcement reflects the continued development of home gym equipment aimed at supporting varied training routines within domestic environments.

Further coverage of the product is available in the company?s previous article about the leg extension and curl machine, which outlines its availability for home-based workouts and its position within the wider Strongway Gym Supplies range.
